Company Introduction

Be established in 2012. We have two production factories located in Shajing street, Bao'an District. Our main business: PCB manufacture, SMT assembly and the component turnkey service!

Boyunfa Tech insist on the spirit of the low-key production and dedication to quality, we service all customers by use the best product and the most sincere sincerity! For many years, Boyunfa keep improving by every step leaves its print, received the general consent and praise from domestic and foreign customers and peers in the industry.

Overview

Early days, the company mainly engaged in PCB manufacture, keep moving forward and achieve excellent achievements in the vibrant electronic market at Shenzhen. We have gradually invested 37 million RMB to purchase the equipment of entire production process, include drilling, electroplating, exposure, forming and testing. In addition, we fully attract the top technical talents from the PCB industry to join us.

Target

Our targets are: cultivate first-class employees, manufacture first-class products, and build first-class reputation! We will continue to focus on customer value, become the most trusted brand supplier, with exquisite quality, efficient delivery speed, and comprehensive after-sales service.

Strength

We are a high-precision circuit board manufacturer that excels in craftsmanship and wins with speed. Our eternal pursuit is quickly meeting customers' demand through the special material, the craft processes, the rapid response and service.

Core advantages

Overall solution

From PCB layout, to manufacturing, and then to assembly, Boyunfa has established a systematic service platform to provide the turnkey service.

Rapid response

We keep fast and smooth communication from the first email received from customer to the end of the project closing, include the email, telephone and face to face communication.

Flexible service

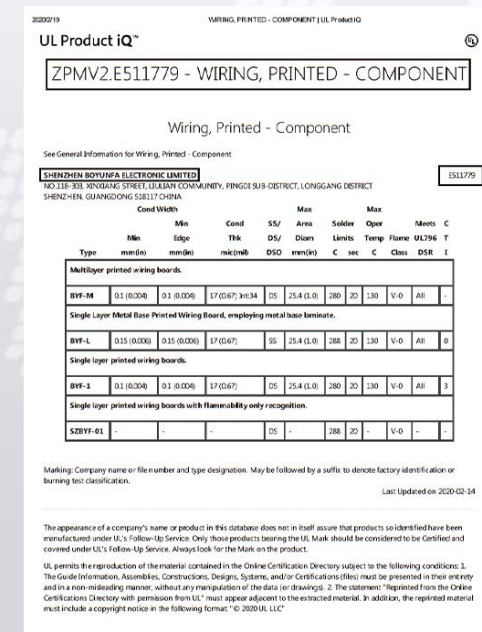

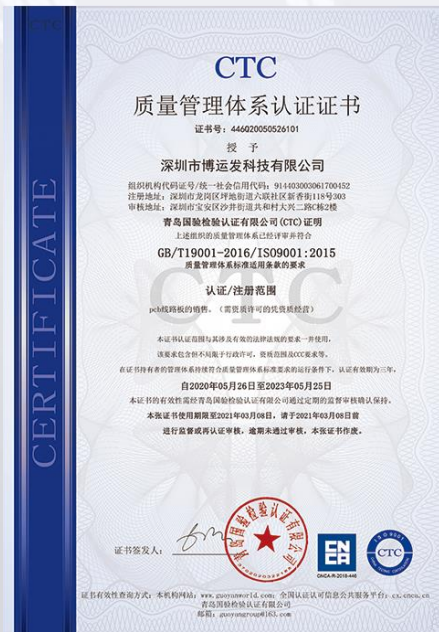

Regard customers as long-term partners, common development, do not pick customers. We provide personalized custom, pre-sales DFM support when customers needs.

Cost optimal

Boyunfa help to optimized design, rapid manufacturing and provide the best cost performance in the whole process, committed to reducing costs and saving time for customers.

Enterprise qualifications

PART

2

Three major products

We have two production factories located in Shajing street, Bao'an District. Our main business: PCB manufacture, SMT assembly and the component turnkey service!

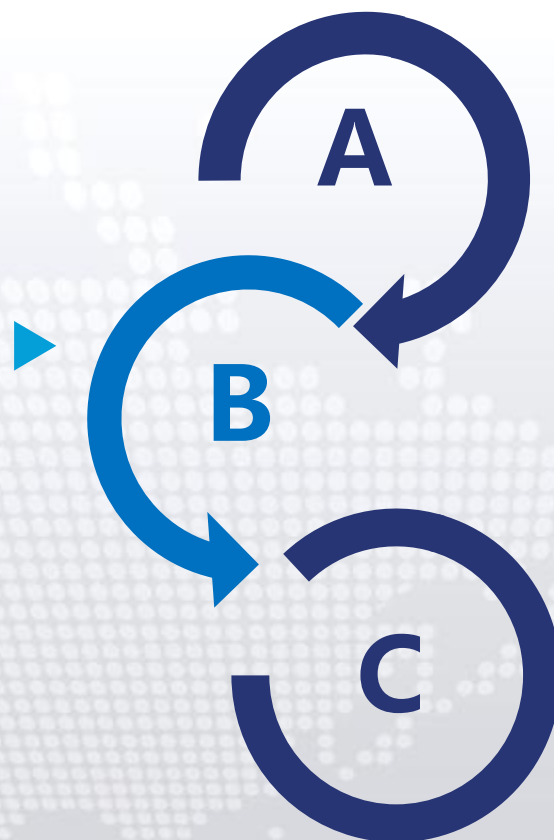

Three major products

SMT Assembly

Our Assembly divided into two directions: mass production and small batch production. Our biggest advantage is integrate PCB and SMT in this efficient market.

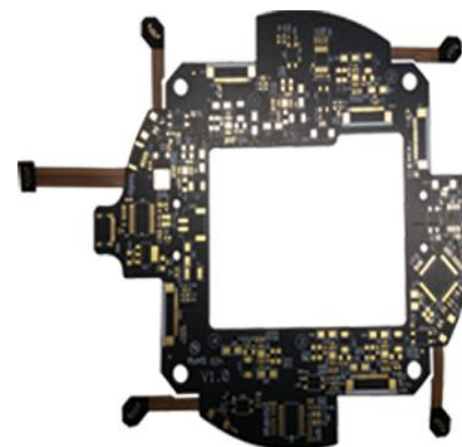

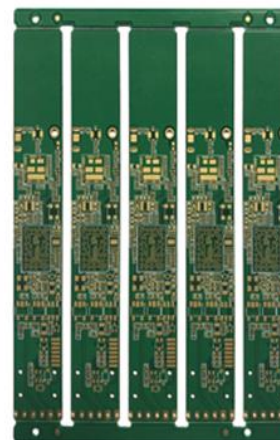

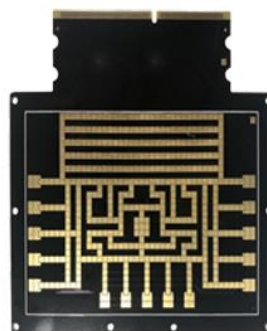

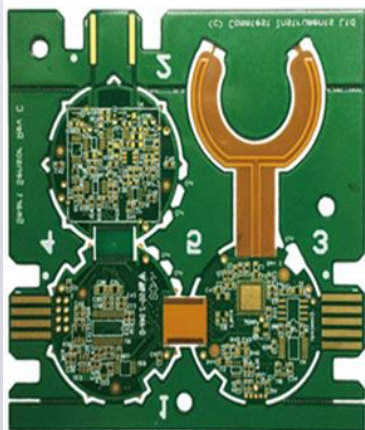

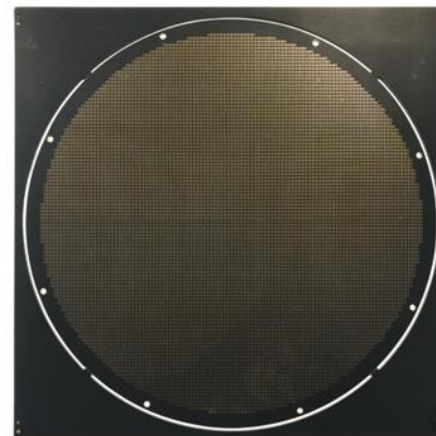

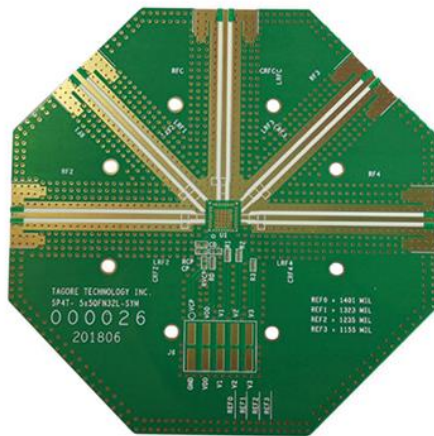

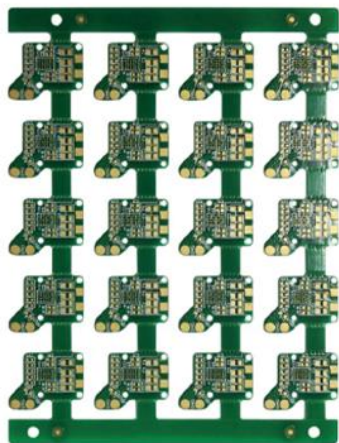

PCB Manufacture

We focus on high-precision, high-quality PCB production, such as High-frequency impedance board, HDI board(buried blind via), Flex-Rigid board, Multi-layer board etc.

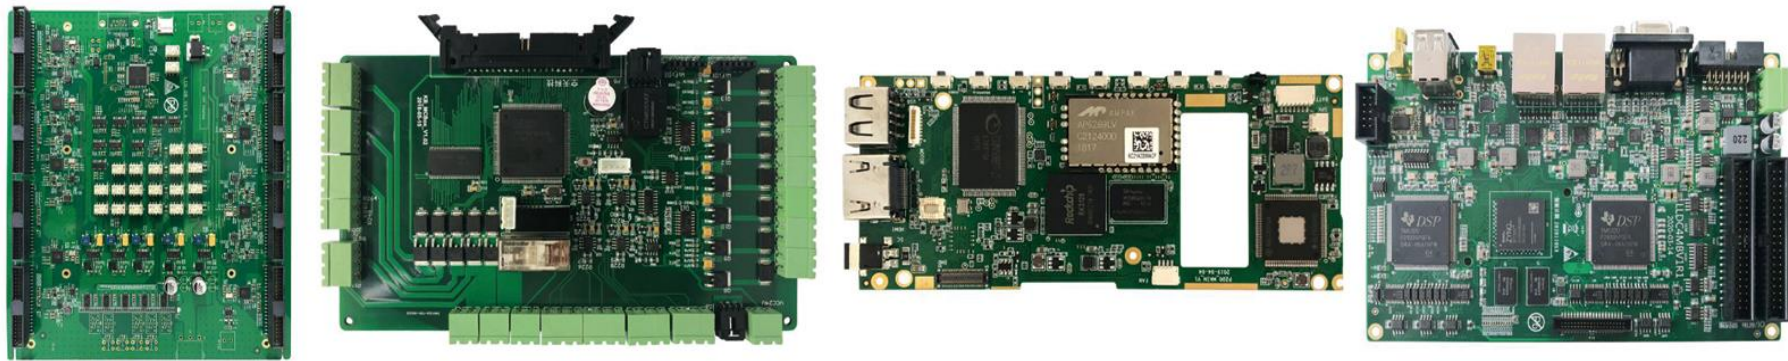

Components Purchase

Our company has long cultivated in the Pearl River Delta region with developed electronics industry, and has comprehensive and rich component supply chain resources in important port areas, such as Shenzhen, Hong Kong, Singapore and Malaysia. It can provide customers with more cost-effective turnkey service.

03.Components Purchase

One-stop services are more reliable!

Convenient, Fast!

We offer the normal capacitor, include the loss, convenient to on machine and saving the purchase time.

Guaranteed leadtime

One-stop procurement of components, purchase department will plan the progress of each part and make production arrangement in advance.

Cost advantage of batching and centralization!

Multi-channel procurement advantages own more competitive prices while guaranteeing quality.

Reduce payment processes and manage project risk

We help to purchase which can reduce your payment processes to avoid more risk. Our supplier will be more positive than you purchase by yourself.

Save your labor cost

You needn't to hire a purchasing staff to add your labor costs. Leave professional matters to professional people, worry-free and efficient.

Save your time to improve operational efficiency

You need spend more time on purchasing. Let we help do that, saving your purchase time to do more value matters!

Reduce courier processes and save freight costs

You need receive and check the components when you purchase and then send to us. Let we provide the turnkey service which can avoid this process and reduce the risk of lost and damaged during shipping.

Improve the ability of resist risk of your projects

You need spend more time on purchasing. Let we help do that, saving your purchase time to do more value matters!

One-stop responsibility, worry-free and more assured!

Let's start with a clear concept: we are a one-stop manufacturer, not a single fabricator or single item component supplier. No matter the question of PCB, SMT or Component, we focus on paying order for your entire finished product.

03.Components Purchase

Original authenticity guaranteed!
Strict quality control !

01

Complete component models, 200000 kinds stocks, One-stop service

02

Independent and professional purchasing department, quick response. We can finish the purchase quote of 100pcs within 4 hours, can finish the quote of mass within 1-2 work days.

03

We have hundreds of long-term cooperation suppliers, which can provide competitive products and services.

04

If you need, we can help find the competitive alternative.

05

Components' quality assurance from the source. We will purchase the components according your BOM required supplier, what's more, our components from the famous component fabricator and Tier 1 component distributor.

03.Components Purchase

Original authenticity guaranteed!
Strict quality control!

06

Purchasing time is short. The fastest 3 days to complete the components and put on the machine for assembly.

07

For unused components, we can help to escrow. Our warehousing department has professional storage equipment to strictly control the temperature and humidity of the storage environment.

08

Choosing us, you needn't build the purchase team and quality inspection team, which can help save the costs of 3-5 staffs.

09

Choosing us help you avoid the probability of buying fake and wrong model components.

10

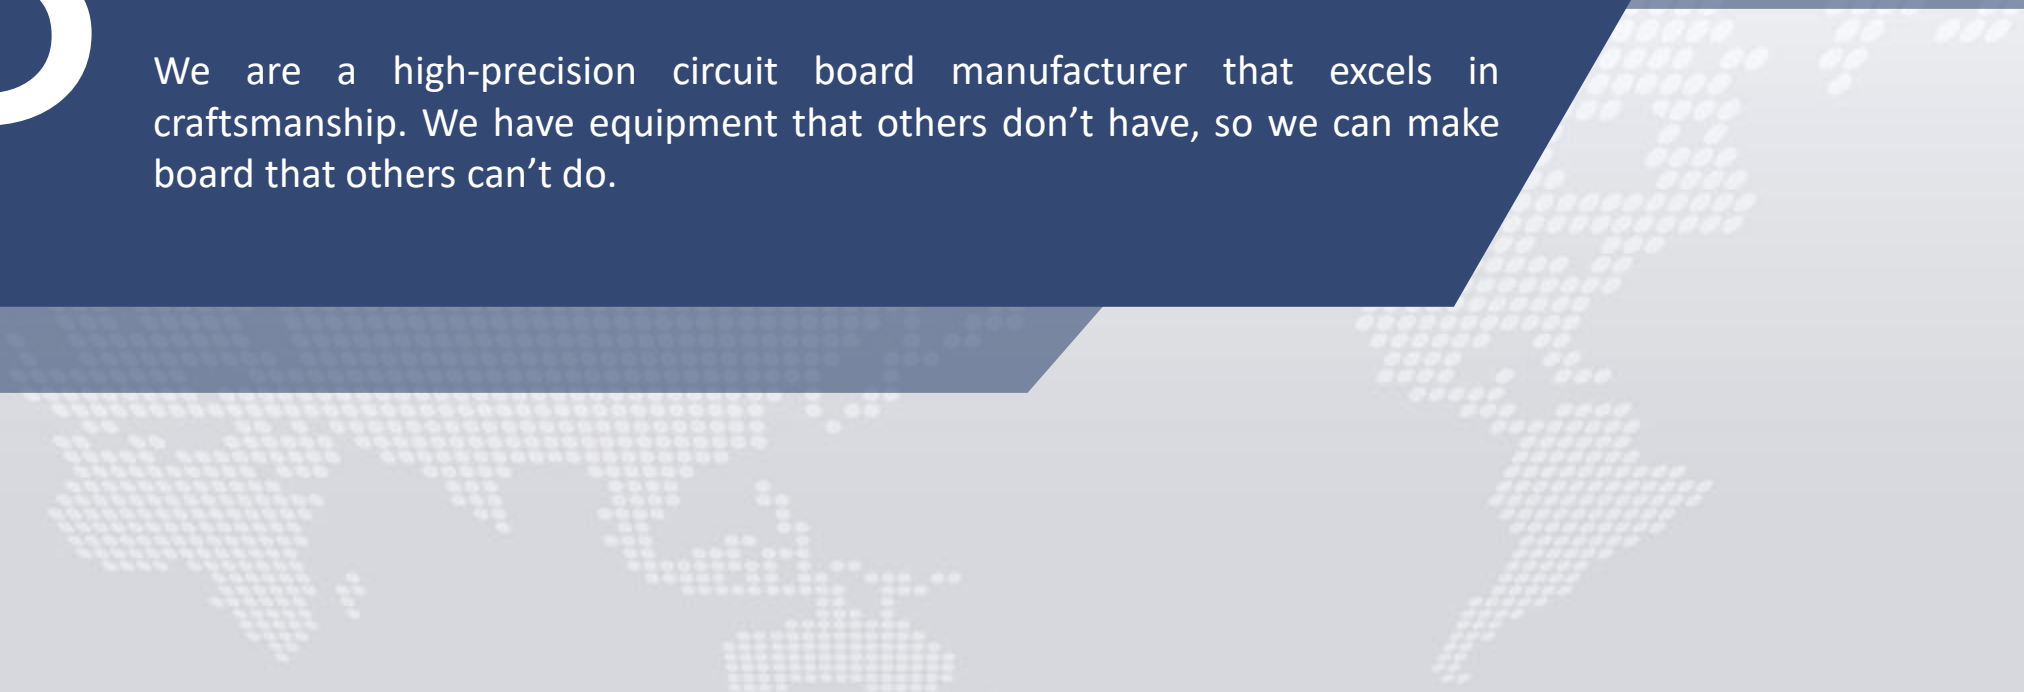

Choosing us can help you reduce the mass purchasing costs.

PART

3

Device Introduction

We are a high-precision circuit board manufacturer that excels in craftsmanship. We have equipment that others don't have, so we can make board that others can't do.

PCB Manufacture-Device Introduction

LDI Exposure machine

Precise alignment, no film required, fast, accurate, saved.

Multilayer press machine

Precise alignment, up to 60 layers of circuit boards can be pressed.

Laser drilling machine

Minimum machinable HDI blind and buried vias as small as 0.1mm!

PCB Manufacture-Device Introduction

Jingming plating machine

Minimum machinable circuit width/space as small as 2/2mil.

Blind hole filling line

Solid copper tamponade into blind vias and the holes in pads, which can pass high current.

Character printer

Precise alignment, up to 60 layers of circuit boards can be pressed.

PCB Manufacture-Device Introduction

Halogen-free tester

Simple- fast, accurate and reliable.

Impedance tester

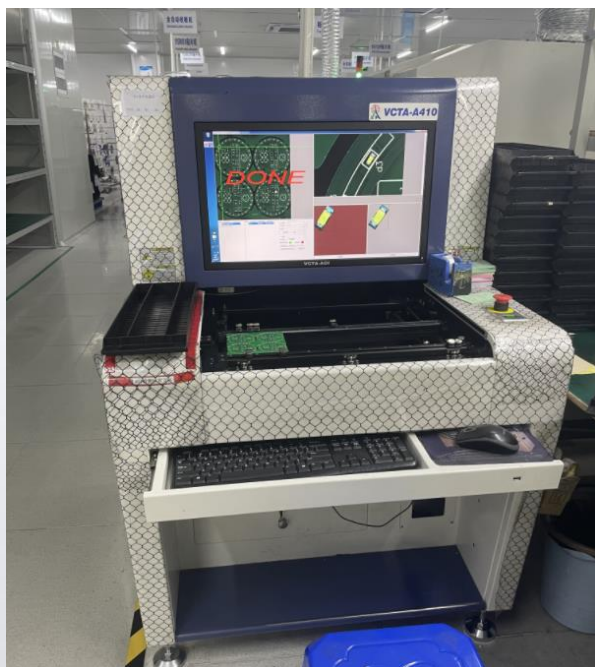

Accurate measurement, one-click reporting.

Maichuangli tester

Measure 1800 points per minute, the minimum pad is 0.15mm.

SMT Assembly-Device Introduction

Automatic optical instrument

Fast and accurate identification, solder paste printing, parts lack of tin, solder joint lack of solder and other problems.

GKG solder paste printing machine

CCD digital camera system, rail positioning system, high-precision PCB thickness adjustment jacking platform, high-speed screen cleaning.

SPI Solder paste detector

It can fully identify the height, fullness, lack and less of tin, and ensure that the solder paste printing is 100% good.

SMT Assembly-Device Introduction

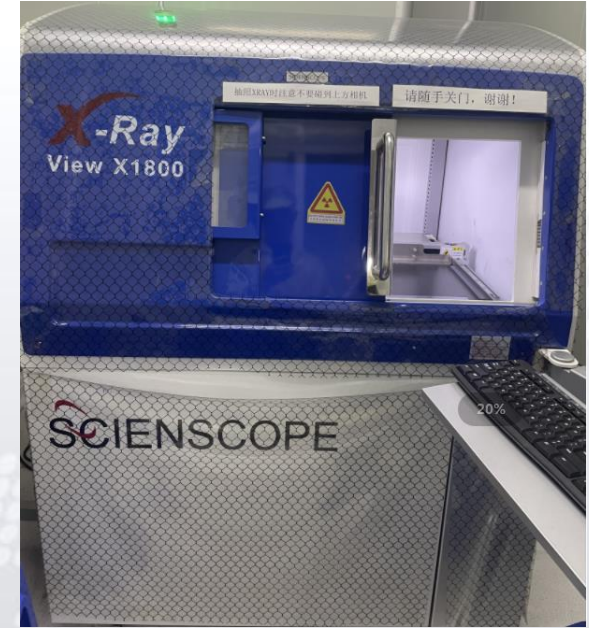

Ridong wave soldering machine

Drawer modular design for easy operation. The stable temperature control system and spray system are well received by the industry.

Jintuo reflow soldering machine

Dual track, dual temperature sensor, dual safety control mode, stable and reliable performance, easy maintenance.

X-Ray tester

It can detect BGA pads, which be shielded covers or under module devices metal housings to prevent problems such as tin connection and short circuit.

SMT Assembly-Device Introduction

First product detector

It can accurately measure whether the parameters and models of components are consistent with BOM.

Yamaha YSM20R pasting machine

Wide range of mountable components, high speed and versatility.

Yamaha YSM10R pasting machine

The timeliness is 46000CPH. the flexibility and mobility are very good, accurate identification and low loss.

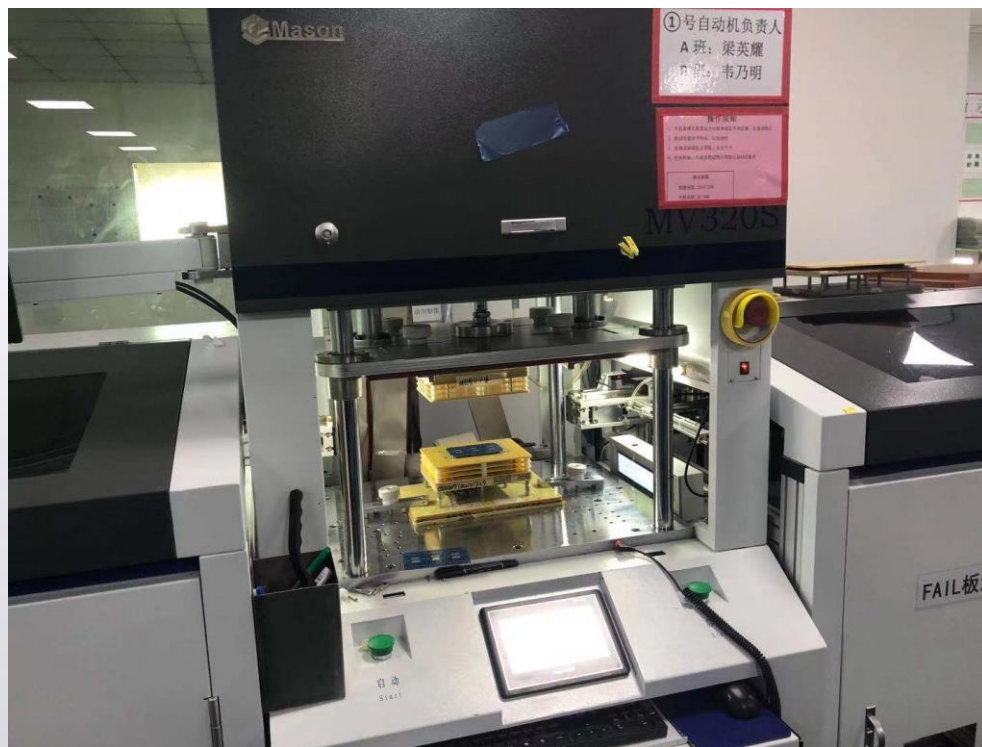

PART 4

Workshop Display

We are a high-precision circuit board manufacturer that excels in craftsmanship. We have equipment that others don't have, so we can make board that others can't do.
